

IN THE SPECIFICATION

Please replace the paragraph beginning at page 10, line 5, with the following rewritten paragraph:

The printed circuit board 23 is formed in an almost circular disc shape or in a circular shape having ~~at least one flat surface~~ surfaces 26A, 26B. The printed circuit board 23 fixes on the rotation shaft 21 such that the rotation shaft 21 perpendicularly intersects the printed circuit board 23 at the center portion thereof.

Please replace the paragraph beginning at page 10, line 9, with the following rewritten paragraph:

One surface 26B of the printed circuit board 23, as described above, includes the commutator with the contact electrode parts 23a and the extending parts 23b. The contact electrode parts 23a are led to a peripheral portion of the printed circuit board 23 through the extending parts 23b, and are connected to the rotor coils 22a.

Please replace the paragraph beginning at page 10, line 17, with the following rewritten paragraph:

As stated above, the commutator includes the contact electrode parts 23a formed of the conductive foil on one surface 26B of the flat disc-shaped printed circuit board 23. The electrode brushes 16, which are previously fixed to the support base 13, press the surface 26B of the contact electrode parts 23a in the axial direction of the rotation shaft 21.
